Dear Federal Communications Commission,

The iPhone has set the stage for the future of mobile Internet -- but bad policies allow companies like AT&T and Verizon to shackle great gadgets to their closed networks.

To free wireless Internet, the FCC and Congress must use the 700MHz spectrum auction to create an open network that gives consumers:

1. The freedom to use whatever device we want on any network.
2. The freedom to choose among many providers in a competitive wholesale marketplace.
3. The freedom to access any content or services we want through our devices.

Sincerely,

Erika Wilson  
1055 Puget Dr. #2  
Edmonds, WA 98020

3. The freedom to access any content or services we want through our devices.

I have been using a Motorola Razr from Verizon Wireless for a year now. It is crippled, just like the motorola phone they sold me before that. I can't use half of the bluetooth features that other carriers let their users have and I'm stuck in a contract. Verizon uses "security" as the excuse. The real reason is that they want to make me use "get it now" their pay for content service. I can't upload photos or ringtones to my phone or photos shot with its built in camera w/o using their pay service.

That is what is wrong with the iPhone as well. Open up these devices so we can use what we are paying for!

My next phone will come from whatever company offers me an "open" phone. The one with the least restrictions gets my business .

Sincerely,

Jeff Schwartz
